

The Census 2020 Low Response Score (LRS) and Lowell, Massachusetts

Lowell Population Characteristics

Lowell's population characteristics put the city at a high risk for undercount in the upcoming Census. According to the latest ACS estimates, Lowell's population includes:

- a higher than average proportion of renters versus homeowners, at 57.8% compared to 37.6% state average
- a higher percentage of single mothers, at 20.4% compared to 12.3% statewide
- A wide array of languages are spoken, including 15.3% speaking Spanish and 10.4% speaking other Indo-European languages compared to 8.8% for both statewide.

This includes a large Mon-Khmer/Cambodian speaking demographic (LOW: 11.8%; MA: 0.4%;), Portuguese speaking demographic (LOW: 4.9%; MA: 2.8%) as well as populations of speakers of African languages (LOW: 2%; MA: 0.6%), and Vietnamese (LOW: 2%; MA: 0.6%), among many others.

- Hispanic population at nearly twice the state average, at 20.3% in Lowell compared to 11.2% in Massachusetts
- Higher percent foreign born population, at 26.7% compared to an already higher than national average 16.2% in Massachusetts.

Key Response Characteristics for Lowell and Massachusetts Average

Key Demographics	Massachusetts	Lowell
Ages 15-24	14.0%	17.0%
Hispanic	11.2%	20.3%
Female householder, no husband present, family	12.3%	20.4%
Vacant housing units	9.7%	6.1%
Poverty level, all people, w/in past 12 months	11.1%	22.4%
Renter-occupied	37.6%	57.8%
Owner-occupied	62.4%	42.2%
Foreign-born	16.2%	26.7%
Speak English less than "very well"*	9.1%	20.9%
*Languages spoken other than English		
Spanish	8.8%	15.3%
Speak English less than "very well"	3.6%	6.7%
Other Indo-European languages	8.8%	10.4%
Speak English less than "very well"	3.1%	4.5%

The Low Response Score

In preparation for the 2020 Census, the U.S. Census Bureau has developed a new hard-to-survey metric called the *Low Response Score (LRS)*. This score identifies block groups and tracts whose characteristics predict low census mail return rate and are highly correlated (negatively) with census and survey participation. To calculate this score, the Bureau uses 2010-2014 American Community Survey data and looks at variables including housing, demographic, and socioeconomic, together with census operational data, including the 2010 Census Mail Return Rate for each block group and tract.

The LRS can be interpreted as the percentage of households predicted to NOT self-respond to the Decennial Census; the higher the LRS is in a census tract, the harder that area may be to survey. So, for example, if LRS=25, Census estimates that 25% of households in that tract will not self-respond to the Census. As a general rule of thumb, areas with a LRS of over 29 are considered the hardest to count in the upcoming Census.

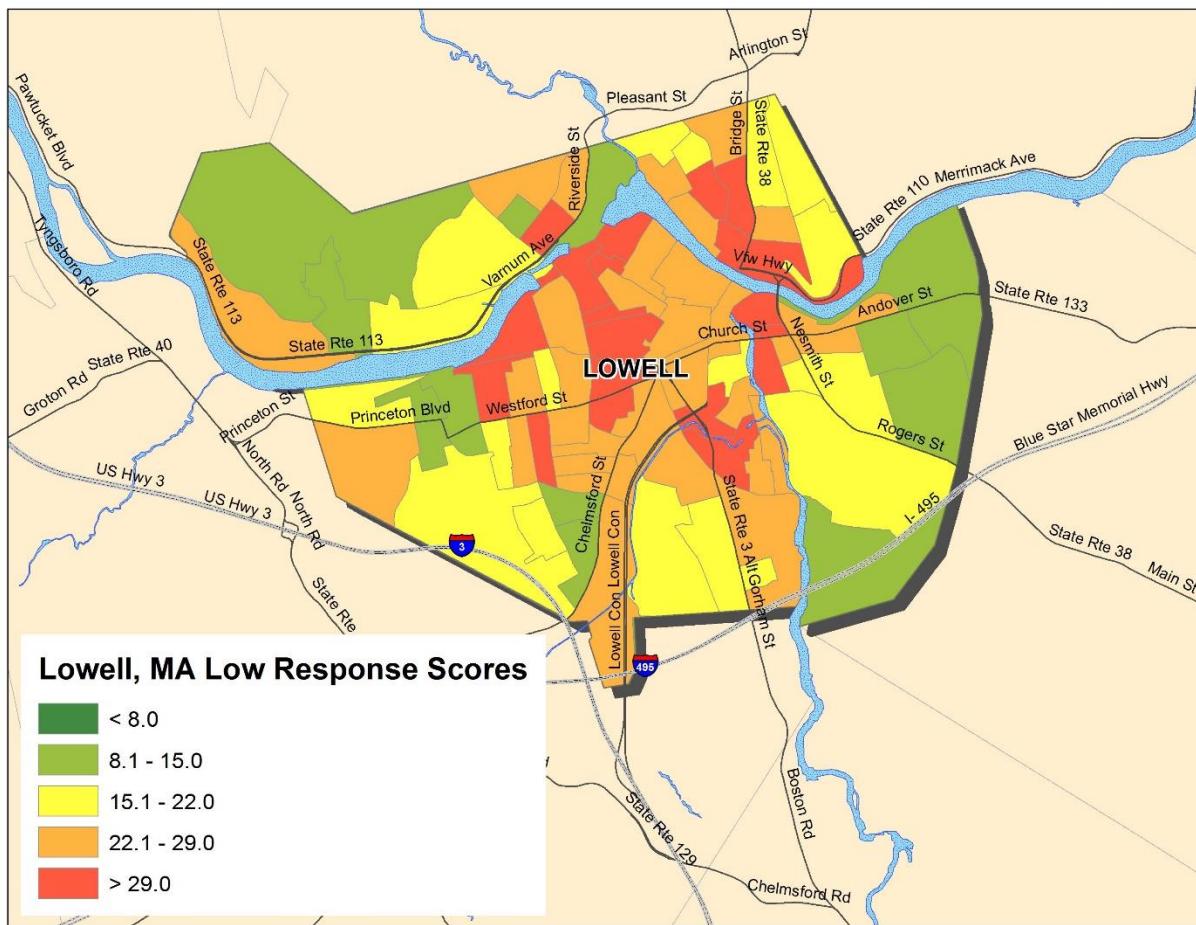

Factors that increase a geography's Low Response Score include high percentages of:

- vacant units
- Hispanic population
- % of single female head-of-households
- households at or below the poverty level
- college-aged population (18-24 years)
- renters versus homeowners

Lowell, Massachusetts Hard-to-Count Map

Low Response Score Map, Lowell

- Of all 4,889 block groups with LRS numbers in Massachusetts, the average LRS is 18.
- Of all 80 block groups with LRS numbers in Lowell, the average LRS is 24, with 55% of block groups scoring 25 or higher and ranging up to 43 in the hardest-to-count Census block group.
