DESCRIPTION:					
The objective of this project is to procure and install a dust collection system. The system should effectively capture and filter airborne dust generated during woodworking processes, ensuring a clean and safe working environment. The existing dust collection system in our carpentry shop is showing signs of wear and may not effectively capture and filter the airborne particles produced during woodworking activities. With a growing concern for air quality and health, it is essential that we invest in an upgraded system that meets current safety standards.
