### The Census 2020 Low Response Score (LRS) and New Bedford, Massachusetts

#### **New Bedford Population Characteristics**

New Bedford's population characteristics put the city at a high risk for undercount in the upcoming Census. According to the latest ACS estimates, New Bedford's population includes:

- a higher than average proportion of renters versus homeowners, at 59% compared to 37.6% state average
- a high percentage of single mothers, at 20.6% compared to 12.3% statewide
- persons below poverty in New Bedford at twice the state average; 23.1% in New Bedford compared to 11.1% statewide
- Hispanic population at nearly twice the state average, at 20% in New Bedford compared to 11.2% in Massachusetts
- Limited English ability in New Bedford is twice the state average, with 17.5% speaking English "less than very well" compared to 9.1% statewide; the largest demographic being 8.5% of residents who speak Portuguese and speak English "less than very well", an additional 9.7% speak Portuguese and are fluent in English
- High percent foreign born population, at 20.8% compared to an already higher than average 16.2% in Massachusetts.

Key Response Characteristics for New Bedford and Massachusetts Average

Key Demographics	Massachusetts	New Bedford
Ages 15-24	14.0%	13.4%
Hispanic Female householder, no husband present,	11.2%	20.0%
family	12.3%	20.6%
Vacant housing units	9.7%	9.0%
Poverty level, all people, w/in past 12		
months	11.1%	23.1%
Renter-occupied	37.6%	59.0%
Owner-occupied	62.4%	41.0%
Foreign-born	16.2%	20.8%
Speak English less than "very well"*	9.1%	17.5%
*Languages spoken other than English		
Spanish	8.8%	14.6%
Speak English less than "very well"	3.6%	7.4%
Other Indo-European languages	8.8%	21.8%
Speak English less than "very well"	3.1%	9.7%

# **The Low Response Score**

In preparation for the 2020 Census, the U.S. Census Bureau has developed a new hard-to-survey metric called the Low Response Score (LRS). This score identifies block groups and tracts whose characteristics predict low census mail return rate and are highly correlated (negatively) with census and survey participation. To calculate this score, the Bureau uses 2010-2014 American Community Survey data and looks at variables including housing, demographic, and socioeconomic, together with census operational data, including the 2010 Census Mail Return Rate for each block group and tract.

The LRS can be interpreted as the percentage of households predicted to NOT self-respond to the Decennial Census; the higher the LRS is in a census tract, the harder that area may be to survey. So, for example, if LRS=25, Census estimates that 25% of households in that tract will not self-respond to the Census. As a general rule of thumb, areas with a LRS of over 29 are considered the hardest to count in the upcoming Census.

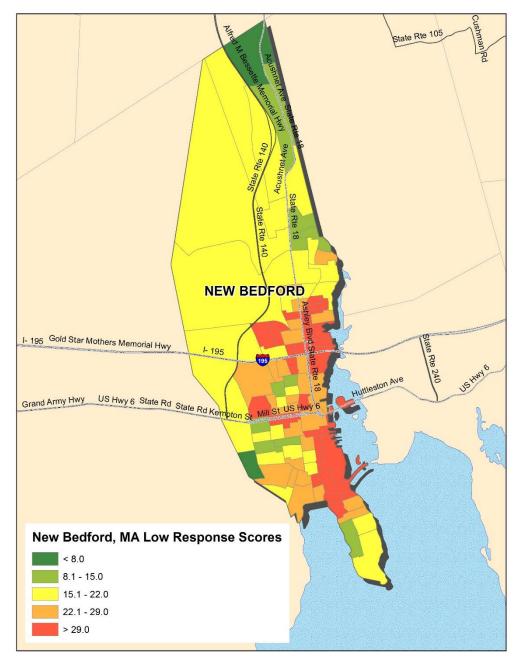

Factors that increase a geography's Low Response Score include high percentages of:

- vacant units
- Hispanic population
- % of single female head-ofhouseholds
- households at or below the poverty level
- college-aged population (18-24 years)
- renters versus homeowners

# New Bedford, Massachusetts Hard-to-Count Map

# Low Response Score Map, New Bedford

- Of all 4,889 Census block groups with LRS numbers in Massachusetts, the average LRS is 18.
- Of all 88 block groups with LRS numbers in New Bedford, the average LRS is 24, with almost half of the block groups scoring 25 or higher and ranging up to 38 in the hardest-to-count Census block groups.
