

The Census 2020 Low Response Score (LRS) and Woburn, Massachusetts

Woburn Population Characteristics

Woburn's population characteristics generally put the city at a low risk for undercount in the upcoming Census, however there are still demographic factors that may adversely influence count outcomes. According to the latest ACS estimates, Woburn's population includes:

- an average percentage of renter-occupied households, at 37.8% compared to 37.6% statewide
- a slightly higher than average foreign-born population, at 17.8% compared to 16.2% statewide
- Woburn has a significantly lower than average percent of Spanish speakers compared with the state average, however more speakers of Indo-European languages, at 12.2% compared with the average at 8.8%. 4.1% of the city's population speaks one of these other languages and English less than "very well".
 - This includes communities speaking Portuguese (approx. 2,000), French/French Creole (≈700), other Asian languages (≈500), Slavic languages (≈250), and African languages (≈200)

Key Response Characteristics for Woburn and Massachusetts Average

Key Demographics	Massachusetts	Woburn
Ages 15-24	14.0%	11.3%
Hispanic	11.2%	3.5%
Female householder, no husband present, family	12.3%	10.4%
Vacant housing units	9.7%	6.4%
Poverty level, all people, w/in past 12 months	11.1%	6.0%
Renter-occupied	37.6%	37.8%
Owner-occupied	62.4%	62.2%
Foreign-born	16.2%	17.8%
Speak English less than "very well"*	9.1%	8.1%
*Languages spoken other than English		
Spanish	8.8%	2.4%
Speak English less than "very well"	3.6%	1.2%
Other Indo-European languages	8.8%	12.2%
Speak English less than "very well"	3.1%	4.1%

The Low Response Score

In preparation for the 2020 Census, the U.S. Census Bureau has developed a new hard-to-survey metric called the *Low Response Score (LRS)*. This score identifies block groups and tracts whose characteristics predict low census mail return rate and are highly correlated (negatively) with census and survey participation. To calculate this score, the Bureau uses 2010-2014 American Community Survey data and looks at variables including housing, demographic, and socioeconomic, together with census operational data, including the 2010 Census Mail Return Rate for each block group and tract.

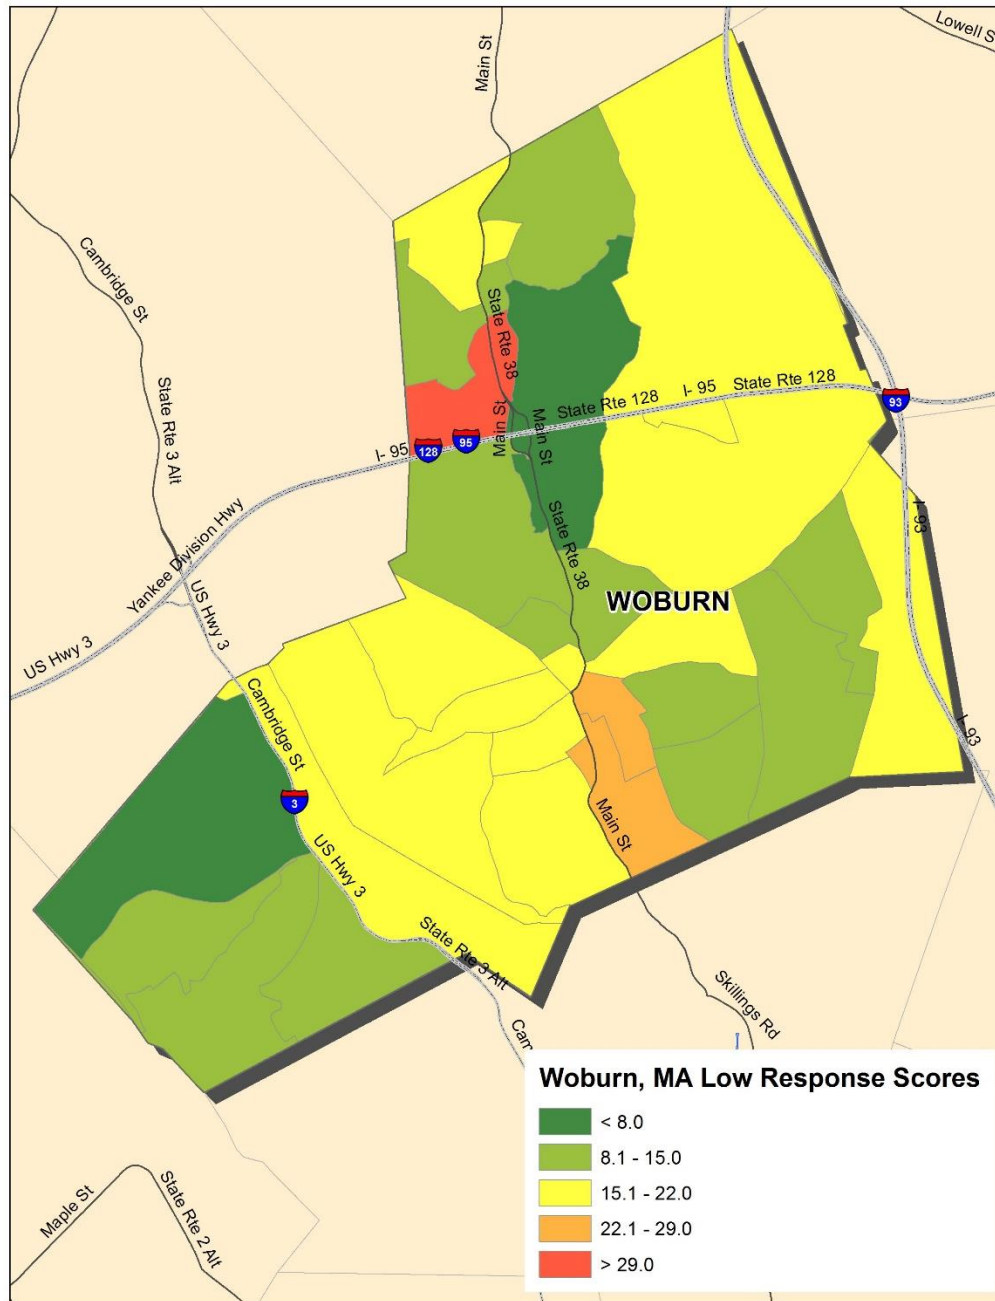

The LRS can be interpreted as the percentage of households predicted to NOT self-respond to the Decennial Census; the higher the LRS is in a census tract, the harder that area may be to survey. So, for example, if LRS=25, Census estimates that 25% of households in that tract will not self-respond to the Census. As a general rule of thumb, areas with a LRS of over 29 are considered the hardest to count in the upcoming Census.

Factors that increase a geography's Low Response Score include high percentages of:

- vacant units
- Hispanic population
- % of single female head-of-households
- households at or below the poverty level
- college-aged population (18-24 years)
- renters versus homeowners

Low Response Score Map, Woburn

- Of all 4,889 Census block groups with LRS numbers in Massachusetts, the average LRS is 18.
- Of 16 block groups with LRS numbers in Woburn, the average LRS is 16, ranging from 6 to 30.
- Six block groups in Woburn have LRS scores of 20 or more.
